

Simple Security for Users on the Go

DNSWatchGO is a Cloud-based service that provides domain-level protection, content filtering, and integrated security awareness training to keep your users safe when they travel outside of your secure network perimeter. When critical alerts are seen, WatchGuard's team of security experts performs a tailored analysis of the potential threat, following up with an easy-to-understand accounting that includes detailed insights about the potential infection. When a user clicks a malicious link, DNSWatchGO automatically redirects them to a safe page and offers resources that reinforce security education.

“ Our antivirus was good. WatchGuard is better. WatchGuard was simple to deploy and immediately stopped attacks from impacting our business. ”

~ Mike Brooks, IT Manager, SEEPEX Inc.

PROTECTION ON THE GO

WatchGuard DNSWatchGO provides defense and content filtering that protects users when they are outside of the network, without requiring a VPN. By monitoring outbound DNS requests and correlating this against our aggregated intelligence, DNSWatchGO stops endpoints from talking to malicious infrastructure. When a connection to a bad domain is attempted, the connection is blocked, and the malicious traffic is rerouted to DNSWatch servers for further investigation. Command and control callbacks, phishing attacks, and data exfiltration attempts are automatically blocked.

DNSWatchGO can also prevent your users from accessing inappropriate content. You can establish policies for your users based on 130 pre-defined blocking categories, and fine-tune access with the ability to establish and enforce policies by user or group.

OFF-NETWORK VISIBILITY

As users move outside your network you lose visibility into their Internet activity, creating a significant blind spot in your security. With DNSWatchGO customers gain consolidated visibility of all on- and off-network devices protected, including the content that is filtered and any malicious websites visited. DNSWatchGO offers detailed information on the location of the endpoint, as well as the attacker, type of attack, and attacker goals without requiring you to comb through logs.

IMMEDIATE SECURITY AWARENESS

Ninety percent of attacks begin with a successful phishing email that tricks users into clicking a link or downloading a file they shouldn't. DNSWatchGO is the first security service to provide phishing protection and education wherever your users go. When an end user clicks on an email or link that DNSWatch has identified as a phishing attempt, they are redirected to a game that educates on the warning signs of a phishing attacks and gives the user an action to take, such as reporting the offending email or speaking with a member of your IT team.

FEATURES & BENEFITS

- Detects and blocks malicious DNS connections for devices outside of your network.
- Enables content filtering with 130 pre-defined blocking categories to limit access to risky areas of the web.
- Provide immediate phishing education to users at the time of click for heightened end user awareness after an attempted attack.
- It's quick to install and easy to manage – saving time and costs and reducing the burden on busy IT staff.
- Supports Chrome OS, Windows 8 and 10.
- Compatible with common deployment tools.

Simple Security for Users on the Go

CLOUD-BASED MANAGEMENT

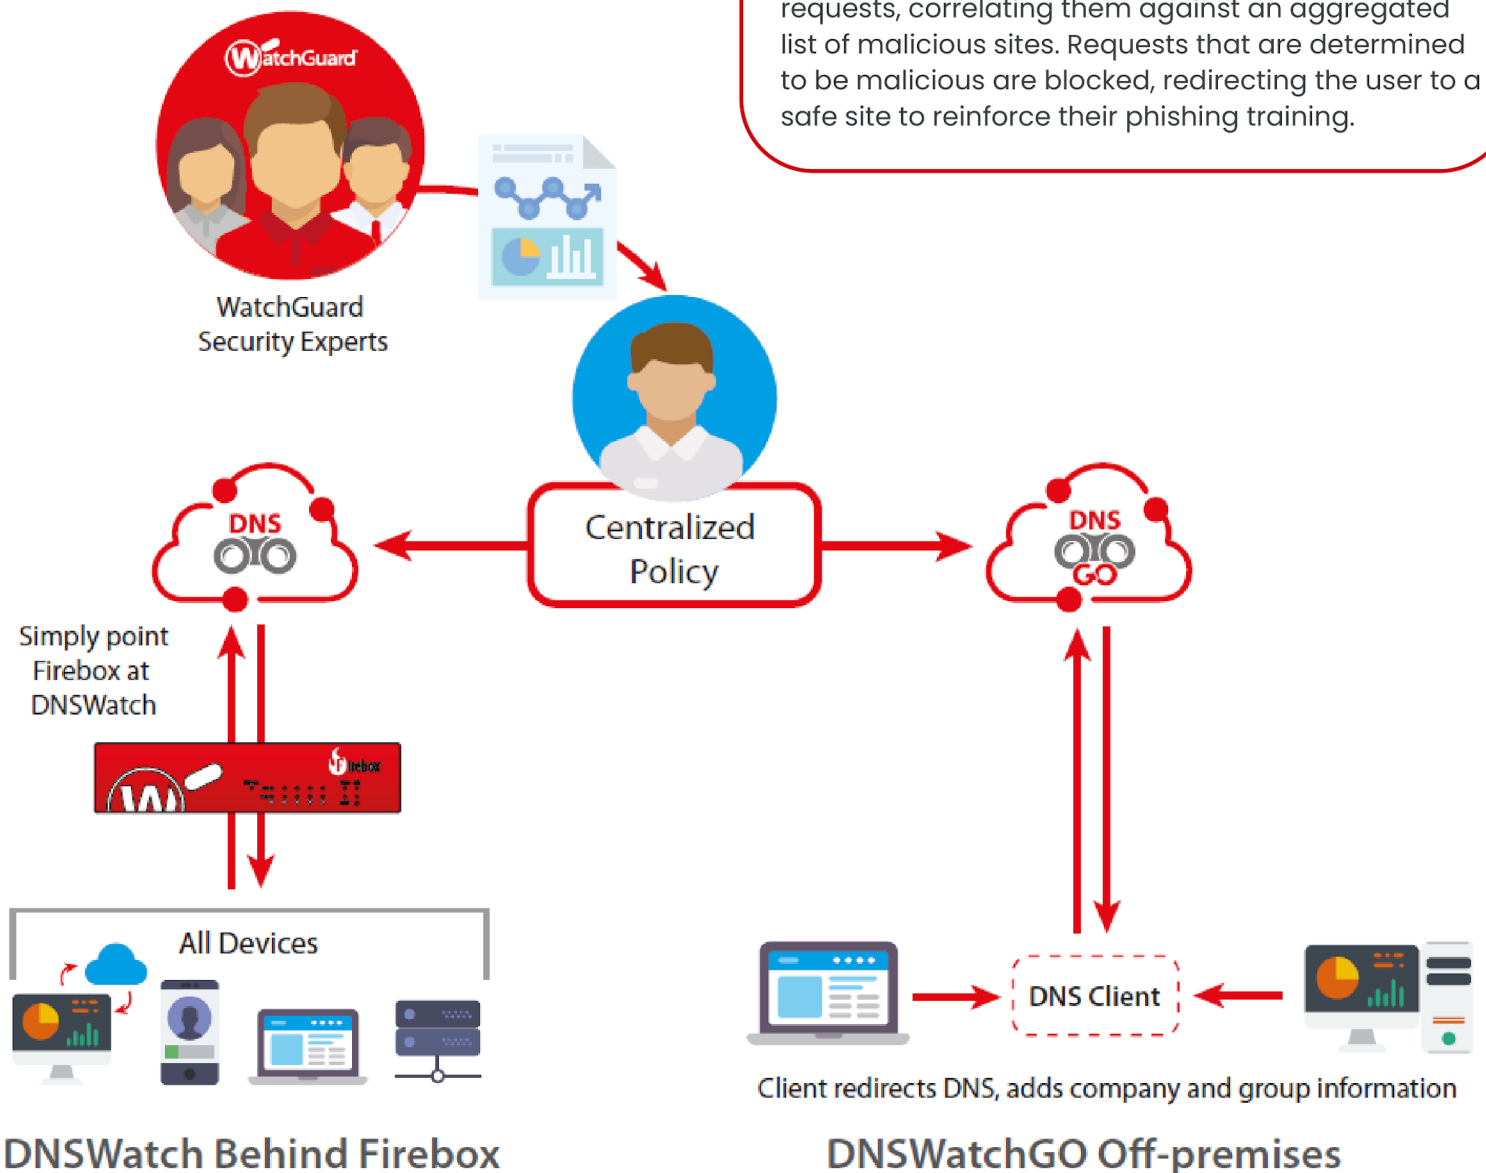

As a 100% Cloud-based solution, DNSWatchGO is easy to deploy and manage, saving you time and money. There's no hardware, and no need to update software manually. Devices deploy in minutes, quickly gaining visibility into Internet activity wherever your user goes. Centrally manage DNSWatch policies for all of your users on- and off-network.

STRONG SECURITY AT EVERY LAYER

Uniquely architected to be the industry's smartest, fastest, and most effective network security products, WatchGuard solutions deliver in-depth defenses against advanced malware, ransomware, botnets, trojans, viruses, drive-by downloads, data loss, phishing and much more.

HOW IT WORKS

WatchGuard DNSWatchGO monitors outbound DNS requests, correlating them against an aggregated list of malicious sites. Requests that are determined to be malicious are blocked, redirecting the user to a safe site to reinforce their phishing training.

WatchGuard Cloud

- Connect in real time to deploy tasks to thousands of devices in seconds
- Manage all WatchGuard-branded products from a single console
- View devices across endpoint platforms including Windows, Linux, macOS, iOS and Android

THE WATCHGUARD PORTFOLIO

Network Security

WatchGuard Network Security solutions are designed from the ground up to be easy to deploy, use, and manage – in addition to providing the strongest security possible. Our unique approach to network security focuses on bringing best-in-class, enterprise-grade security to any organization, regardless of size or technical expertise.

Multi-Factor Authentication

WatchGuard AuthPoint® is the right solution to address the password driven security gap with multi-factor authentication on an easy-to-use Cloud platform. WatchGuard's unique approach adds the "mobile phone DNA" as an identifying factor to ensure that only the correct individual is granted access to sensitive networks and Cloud applications.

Secure Cloud Wi-Fi

WatchGuard's Secure Wi-Fi Solution, a true game-changer in today's market, is engineered to provide a safe, protected airspace for Wi-Fi environments, while eliminating administrative headaches and greatly reducing costs. With expansive engagement tools and visibility into business analytics, it delivers the competitive advantage businesses need to succeed.

Endpoint Security

WatchGuard Network Security solutions are designed from the ground up to be easy to deploy, use, and manage – in addition to providing the strongest security possible. Our unique approach to network security focuses on bringing best-in-class, enterprise-grade security to any organization, regardless of size or technical expertise.
