Protect Google Workspace with
OX IT Cyber Protect Cloud

Protect your Google Workspace with a market leading cloud-to-cloud backup & recovery solution tailored to you

OX IT Solutions Ltd

With OX IT's Cyber Protect Cloud, you will receive an in demand, cloud-to-cloud, cost-effective Google Workspace data protection solution. With fast backups, reliable point-in-time recovery, flexible restore and cloud storage options, as well as quick-search functionality, OX IT Cyber Protect Cloud offers you a wide array of additional features – with no additional installation required.

Why is Google Workspace Backup Required?

Google has a great reputation for keeping Google Workspace systems up & available for customers. But like many SaaS solutions, it does not take responsibility for keeping customer data safe – nor does it offer true backup & recovery functionalities.

There are a host of reasons why companies lose their Google Workspace data. The top ones include:

- Malware and ransomware
- Malicious actions
- Accidental data deletion

So while Google ensures infrastructure resilience, data protection remains the customer's responsibility. This means businesses require a backup solution to avoid downtime and unrecoverable data loss.

Get an efficient cloud-to-cloud solution with nothing to install	**Ready-to-use cloud storage options include compliant data centres worldwide from Acronis**	**Protection for Gmail, Drive (including Team Drives), Calendar and Contacts**
Reliable point-in-time recovery of single items and entire Drive or Gmail data	**Quick recovery of needed items with full-text search of Google Workspace backups**	**Verify authenticity of files in Drive backups with blockchain**

BACKUP & RECOVERY

Point-in-time recovery
Isolate file versions via recovery points so you can always restore from previous backups – regardless of what happened to the most recent one.

Quick search
Quickly find and restore needed items with metadata (e.g. searching by file names in Drive, Calendar, Contacts and Gmail) and full-text (in email body copy) search capabilities.

Flexible restore options
Choose the recovery granularity: from single-user items (e.g. emails, attachments) to a user's entire Drive or Gmail data.

Scheduled and on-demand backups
Depending on your requirements, you can set scheduled backups or perform backups on-demand, whenever needed.

Automatic protection of new users and Drives
Acronis Cyber Protect Cloud automatically detects new Google Workspace users and Team Drives. With the ability to apply backup plans to all users and Team Drives, you can ensure all newly added items are safe.

Backup health monitoring and reporting
Quickly review the health of your backup operations and receive backup infrastructure health reports, notifications, and critical alerts.

DATA INTEGRITY & SECURITY

Blockchain-based notarisation for Drive EXCLUSIVE
Benefit from integrated Acronis Cyber Notary technology, which offers independent validation that backed up Drive files are unchanged.

End-to-end Encryption
Be confident no one else has access to your data: all traffic is encrypted in transit using the Transport Layer Security protocol while AES-256 is used to encrypt data at rest.

Security management system
Meet compliance requirements with greater ease. We maintain a security management system for our cloud products. It complies with key international security standards (e.g. GDPR, HIPAA) and has received certifications like ISO 27001 and ISO 9001.
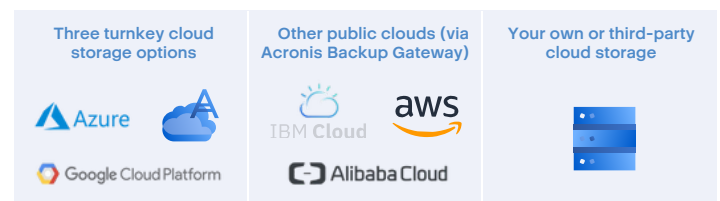

DEPLOYMENT & MANAGEMENT

Quick, easy setup and backup configuration
Enable Google Workspace data protection for yourself almost instantly and avoid upfront costs using Acronis' turnkey, SaaS-based solution. The cloud-to-cloud approach simplifies both the configuration process and maintenance because there is no need to install an agent or any server software.

Unmatched cloud storage options EXCLUSIVE
Choose from numerous options: ready-to-use Google Cloud Storage, Microsoft Azure, Acronis Cyber Cloud Storage, other public clouds (like AWS and other S3-compatible solutions, IBM Cloud, and Alibaba Cloud) via the Acronis Backup Gateway, or your own cloud storage.

Three turnkey cloud storage options	Other public clouds (via Acronis Backup Gateway)	Your own or third-party cloud storage
Azure, Acronis, Google Cloud Platform	IBM Cloud, aws, Alibaba Cloud	

Three readily available public-cloud storages* EXCLUSIVE
Save time setting up Google Cloud and Microsoft Azure as backup destinations and make billing seamless: Google, Microsoft and Acronis cloud storage solutions are already available as native backup destinations and are priced per GB.
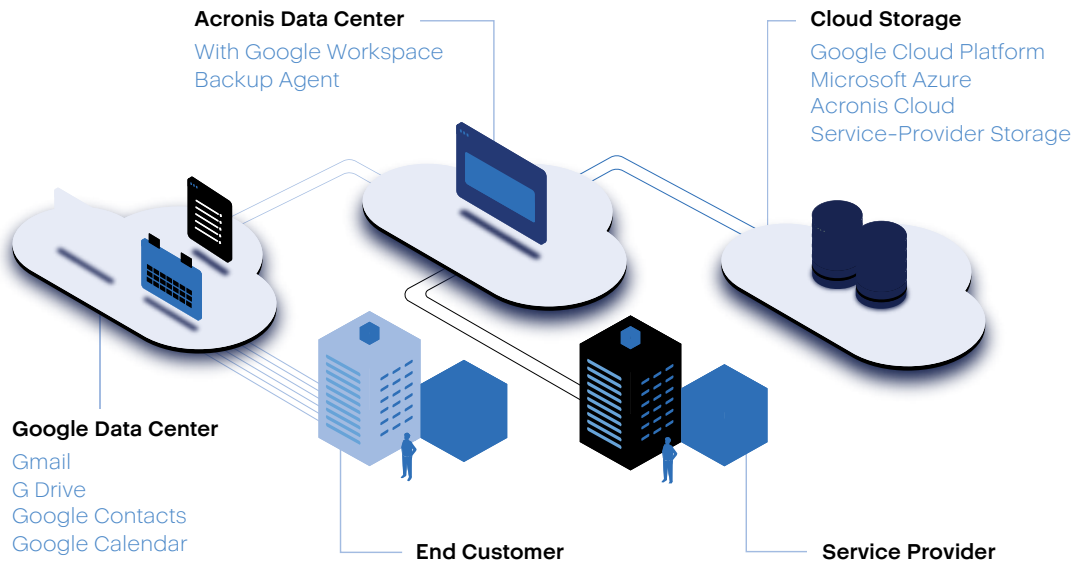

Multi-tenant web console to manage locations
Manage everything and all users/locations from one spot. The web-based multi-tenant, multi-tier management console makes it easy to provision accounts for all users and to oversee backup and recovery tasks from one place.
